

CLIENT BRIEF

Realizing hard and soft savings at Delek US

Delek US, a 1.5-billion-dollar petroleum refining and logistics company, selected SwainSmith to guide its EAM project. An ISO 55000 management system provided the foundation for a successful EAM software system roll-out.

ACTIONS

SwainSmith worked with Delek to develop a structured program (management system) for managing physical assets across the enterprise. This included corporate policy; asset management processes, roles and responsibilities, and performance measures; and an internal auditing program. SwainSmith also developed master databases for Delek's equipment and MRO materials. SwainSmith then helped Delek determine information requirements, select an EAM software vendor, and roll out the EAM software system across the organization.

RESULTS

Together, Delek's management system and EAM software system have improved equipment availability by 3% and reduced maintenance costs by 15%. They have also created significant value in other areas:

- Less unplanned maintenance
- Increased productivity
- Reduced insurance premiums

FACTS AT A GLANCE

INDUSTRY

Oil & Gas

GOALS

Equipment availability, cost reduction, standardization

SOLUTIONS

ISO 55000 asset management system, master data development, EAM software system
